SOMERVILLE, TENNESSEE, FRIDAY, DECEMBER 2, 1921.

NEW SERIES: VOL. XV.—NO. 23

Condensed News of Happenings in And Around Macon

Last Thursday the remains of Miss Anne May Mewborn, of Kansas City, Mo., were laid to rest in the Macon cemetery. She died in Kansas City last Tuesday. Mr. Claud Mewborn, her brother, accompanied the body here. Miss Pearl Mewborn also came.

Miss Mewborn was reared in Macon, and after completing her education, she taught school at the Macon High School for several years. She was loved and honored by everyone who knew her.

Thanksgiving was enjoyed by all in the neighborhood, and many spent the day in hunting. However the day was unusually warm for this time of the year and game seemed to be hard to find. The result was that few hunters brought home much game.

Sorry to hear of another unusual fire which destroyed the barn of E. A. Mewborn. The fire was started by a bolt of lightning. The bolt passed through the loft and hay, out to the head of a cow, killing her. The fire spread rapidly and nothing could be saved, undamaged. Three horses, two mules and one cow lost their lives as a result of the lightning and fire. It might be that lightning so killed some of the horses or mules, but it is not known. After the fire had died down, six wagons on loads of corn meal was hauled away, this being damaged. The loss is estimated to reach \$1500. There was no insurance.

ELMO CLAY

Chamberlain's Tablets

These tablets are intended especially for indigestion and constipation. They tone up the stomach and enable it to perform its functions naturally. They act gently on the liver and bowels, thereby restoring the stomach and bowels to a healthy condition. When you feel dull, stupid and constipated give them a trial. You are certain to be pleased with their effect.

Anthrax Outbreak Again

Considerable alarm has been felt again the past week because of another outbreak of anthrax in the county and the loss of several head of cattle.

This time the outbreak was in the herd of grade Jersey heifers recently brought to the county by W. M. Mayo and H. P. Stainback for sale to the farmers of the county. These cattle have been pastured for some weeks in the bottom pasture near Somerville and were two weeks ago carried to the F. H. Jones farm in the fourth district to pasture the fields. Soon after their arrival there several were stricken, and up to the last report ten had died.

Dr. Gillmann of this city was called and after thorough examination pronounced the trouble anthrax and he called Dr. Brown of the state live stock department here and Dr. Brown agreed in the diagnosis.

The other cattle in the herd, as well as other stock on the Jones farm, were at once inoculated and Dr. Gillmann and Dr. Brown believe there will be no spread of the disease in the community. The carcasses of those that died were burned, as the law requires, thus reducing to a minimum the chances of a spread of the disease.

Several animals have died in the county in the past several months with anthrax, but in each case inoculation and quarantine has prevented its spread and the county has been saved an epidemic of this most dangerous trouble.

Southern Baptists Wage Vigorous Warfare Against Tuberculosis In This Section

FOUNTAIN PLAYS IN CENTER OF COURT BETWEEN TWO INFIRMARIES

In one of the most extensive fights that has ever been made by any religious body in America for the eradication of disease, Southern Baptists, through their Home Mission Board, have undertaken the task of combating tuberculosis in the 18 states comprising the territory of the Southern Baptist Convention. The first step in this direction was the recent establishment on a tract of 143 acres at El Paso, Texas, of the Southern Baptist Sanatorium, where \$500,000 from the 75 Million Campaign has been invested and where \$500,000 more will be placed by the end of the Campaign period. The institution is located at an altitude of 4,500 feet on the side of Mt. Franklin and commands an excellent view of the mountains of New Mexico, Western Texas and Old Mexico, whose border is only six miles distant. Dr. H. F. Vermillion is superintendent.

Included in this plant at present are the administration building, the newly completed women's infirmary and men's infirmary, a heating and refrigerating plant and the superintendent's quarters. Provided for in the building plans for the future are a medical and educational building, nurses' home, children's building, dormitories for convalescent patients, an occupational and vocational therapy building, chapel, laundry and minor structures.

150 People Die Daily

Indicating the need of additional effort looking to the elimination of tuberculosis in the South, reliable figures gathered by the public health agencies of the South and the Nation show that there are 150 deaths daily from tuberculosis in the 18 states comprising the territory of the Southern Baptist Convention, making the annual death toll of the white plague in this section of the country alone

WOMAN'S INFIRMARY BAPTIST SANATORIUM

RECREATION PATIO BETWEEN MEN'S AND WOMAN'S BLDG.

ENTRANCE TO ADMINISTRATION BUILDING

57,782. The death rate from tuberculosis is 14.2% higher in the South than in the Nation as a whole. One reason for the exceedingly high death rate in the South is the great prevalence of the plague among the negroes who are especially susceptible to tuberculosis, the death rate among them being three and one-half times that among the whites. But inasmuch as the negroes will doubtless continue to be intimately associated with the whites in domestic and other work in the future, the whites will never be safe from infection until the negroes, as well as the whites, have been freed from the plague.

It has been estimated that the total economic loss from the ravages of tuberculosis in the South is \$175,000,000 a year, and in projecting their warfare against the plague the Baptists hope to greatly reduce this loss, as well as to save the life and promote the health and general efficiency of the whole people.

Would Educate the People.

In addition to providing treatment for persons who have already con-

INVITING CORNER OF MEN'S INFIRMARY

tracted tuberculosis, the sanatorium is carrying on an educational work that seeks to inform the public at large through the printed page, as to the danger of tuberculosis, how it can be avoided and how, once it is contracted, its progress can be arrested through proper sanitary measures at home. Other phases of the educational program include the training of workers inside the sanatorium and occupational and vocational work for patients. The extension department is widely disseminating literature on how to combat tuberculosis. An endowment fund that is being created for the institution will make possible a much larger circulation of literature and will also enable the institution to take care of indigent patients.

The sanatorium is at present seeking to devise special plans whereby it can serve the negroes of the South in combating tuberculosis. It is felt that the negroes' inability to help themselves in the matter entitles them to this consideration and that this assistance should be given, furthermore, as a means of self-protection on the part of the whites.

Other Phases of Baptist Work.

In addition to the Tuberculosis Sanatorium, Southern Baptists have a string of seventeen regular hospitals in operation and seven others under course of construction. This hospital property is valued at approximately \$7,000,000 and these institutions last year treated 46,000 patients many of them being charity cases. Southern Baptists also operate 19 orphanages in which approximately 5,000 orphan boys and girls are cared for, educated and trained for Christian citizenship.

The Bank Statements

In this issue of The Falcon will be found the published statements of the eight banks doing business in Fayette county, and the statements reflect a much improved financial condition of the country. Most of the banks show increased deposits over those a year ago and show a smaller loan account than a year ago. They show, also, less redemptions than at any time. In fact the condition is a marked improvement over the financial conditions in the community at any time in the past year and half.

The Fayette County Bank, the oldest in the county continues to lead the others in business, and the Somerville Bank & Trust Co., one of the youngest in the county, stands second in volume of business, but stand first in the growth it has made in the past year or two. It is a credit to men in charge of the banks of the county that all passed through the trying times of the past two years without being shaken and that they are safe today, as shown by the statements published herein. The past few years were most trying ones for banks as well as for other business institutions, and it is cause for congratulation that the worst now seems over, and that the banks of Fayette county have passed safely thru it without serious losses.

Honor Roll

Elementary grades in the Somerville school for second month.
GRADE I—Margaret Leach, Elizabeth Rhea, Doris Burnett, Bruce Tucker.
GRADE II—Irene Boyd, Emma Grey Harvey, Holmes Fowler, William Richard Harvey, Erceel Steele.
GRADE III & IV—Bernice Montgomery, Mary Belle Leach, Olivia Reams, Mary C. Linyard, Morris Kee, Aubrey Tomlin, Agnes Boyd, Albert Curtis, Mildred Grills, Earl Martin, Alaf Steele, Inez Parsons.
GRADE V—George Moorman, William Burton, Vernel Richie.
GRADE VI—Mary Robinson, Vernon Steele, Curtis Luck.
GRADE VII & VIII—Robert Burton, Wilma Burnette, Billie Crawford, Nelle Crawford, Frances Crawford, Oneita Montgomery, Mary Mayo, Trice McQueen, Delma Lee Richie, Jannie Taylor.
The following High school pupils names did not reach us in time to be included in last week's list.
Virginia Hows, James Jacques, Marie Dunn, Helen Hobson, Katherine McNeil.

Will Pay to Feed Cottonseed Meal at High Prices if Silage is Used

Even with the present high price of cottonseed meal it will be found profitable to feed to cattle when silage is used as a part of the ration, according to J. H. McLeod, assistant livestock specialist, Division of Extension, However, he states, if no silage is used and corn and clover hay are the principal feeds, then it is doubtful if the addition of cottonseed meal at a cost of about \$42.00 would pay.

Mr. McLeod's statement as to the use of cottonseed meal is here given in full and will no doubt be of interest to farmers and feeders throughout the state:

No doubt there is a number of cattle feeders in the state wondering it with present price of cheap corn whether it would pay them to purchase some cottonseed meal to feed with grain. It is a recognized fact that cottonseed meal at present is selling high in proportion to the price of corn. Ordinarily it may be figured that one pound of cottonseed meal is equal to two pounds of corn for cattle feeding. Figuring from this basis, with corn at 50 cents per bushel, cottonseed meal would be worth in feeding value \$36.00 per ton.

In most places I find 41 percent meal in carload lots selling around \$42.00 per ton, some places a little more in price and some a little less.

But the question is will it pay to feed this \$42.00 cottonseed meal as a supplement to 50 cent corn. This will largely depend upon the kind of roughage which the feeder has at his disposal. Silage always combines best with some protein concentrate like cottonseed meal. Even though a leguminous hay like clover may be added to ration it has been found the cattle will not consume enough of the hay to balance the carbohydrates in the silage. Even with the high price of meal today it will be found profitable to feed some meal when silage is used as a part of the ration. If for example the ration is composed of corn, silage and clover hay, the addition of 2½ pounds of cottonseed meal to the 1,000 pounds live weight of the steer would not only cause the animal to gain more rapidly but would also give him a better finish, higher selling value upon the market and a greater profit to the owner.

If on the other hand a feeder-farmer does not have corn silage, but depends upon corn and clover hay as a fattening ration it is doubtful if the addition of \$42.00 cottonseed meal would pay. Corn and clover hay come near making a balanced ration. Several of the experiment stations have made a comparison of the corn, clover ration with the corn, clover and cottonseed meal rations. It was found that for each 100 pounds of gain that put on the steers receiving the former ration that it took 940 pounds of corn and 484 pounds of clover hay. For the later ration for each 100 pounds of gain it took 737 pounds of corn and 120 pounds cottonseed meal and 376 pounds of clover hay. By applying present day prices to these figures one will find that there is no saving made per 100 pounds gain by the use of cottonseed meal. In fact there will be a slight reduction in cost of 100 pounds gain by the elimination of the meal.

In a case where a feeder was short of corn it might be found profitable to feed cottonseed meal as a part of the ration, the latter part of the feeding period. As steers near the finishing point the amount of hay they will consume will become less. This has a tendency to make an unbalanced ration. If cottonseed meal is to be added at this time under this condition mentioned may be profitable. But under the present price of corn and cottonseed meal it will usually be found just as profitable in corn and clover ration to leave off the cottonseed meal.

Don't Take It For Granted

that just because you are in business, everybody is aware of the fact. Your goods may be the best in the market but they will remain on your shelves unless the people are told about them.

ADVERTISE

If you want to move your merchandise, reach the buyers in their homes through the columns of THIS PAPER and on every dollar expended you'll reap a handsome dividend.
